

AlphaTrade India — Frontend Design System & Theme (v1.0)

Purpose: Define a unified, scalable, and professional design system that governs the entire AlphaTrade India frontend — visuals, interaction patterns, components, and UX behavior.

This design system ensures:

- Visual consistency
 - Cognitive clarity (important for trading)
 - Risk-aware UI behavior
 - Scalability across future modules
-

1. Design Philosophy

AlphaTrade India UI follows "**Professional Trading Cockpit**" philosophy.

Core Principles

1. **Clarity over Beauty**
Information must be readable in < 200ms.
 2. **Risk-First Visual Hierarchy**
Losses and risk states are more prominent than profits.
 3. **Zero Distraction Interface**
No unnecessary animation, gradients, or gimmicks.
 4. **Dark-Mode Native**
Designed for long trading hours and reduced eye strain.
 5. **Action Confidence**
Critical actions (Buy, Kill Switch) must feel intentional.
-

2. Theme Identity

Theme Name

"Midnight Terminal"

Inspired by:

- Institutional trading terminals
 - Bloomberg / Zerodha Kite / Thinkorswim
 - Command-center dashboards
-

3. Color System

3.1 Base Colors

Token	Hex	Usage
bg-primary	#0B0F14	App background
bg-secondary	#111827	Cards / panels
bg-tertiary	#1F2933	Tables / inputs
border-mutated	#2A2F3A	Borders

3.2 Text Colors

Token	Hex	Usage
text-primary	#E5E7EB	Primary text

text-secondary	#9CA3AF	Labels / metadata
text-muted	#6B7280	Disabled

3.3 Semantic Colors (Critical)

Meaning	Hex	Rule
profit	#16A34A	Only for confirmed P&L
loss	#DC2626	Loss, drawdown, SL
warning	#F59E0B	Risk / nearing limits
info	#3B82F6	Neutral system info

Rule: Never use red/green decoratively.

4. Typography System

Font Family

Primary: Inter (System-safe, financial UI friendly)

Fallback:

font-family: Inter, system-ui, -apple-system, BlinkMacSystemFont;

Font Scale

Usage	Size	Weight
Page Title	24px	600
Section Header	18px	600
Card Title	14px	600
Body	13px	400
Caption	11px	400
Numeric (P&L)	14–18 px	600

Numeric Rules

- Use **tabular numbers**
 - Always right-align numeric columns
 - Fixed decimal precision
-

5. Spacing & Layout

Spacing Scale (Tailwind-based)

Token	Value
xs	4px
sm	8px

md	12p
	x
lg	16p
	x
xl	24p
	x
2xl	32p
	x

Layout Grid

- 12-column responsive grid
 - Max width: 1440px
 - Card-based layout
 - No full-width tables without scroll
-

6. Component Design System

6.1 Cards

Usage: Primary information container

Rules:

- Background: bg-secondary
 - Border radius: 10px
 - Shadow: subtle only
 - Padding: 16–20px
-

6.2 Buttons

Primary Action

- Background: info
- Text: white
- Used for: Apply, Save, Confirm

Destructive Action

- Background: loss
- Used for: Kill Switch, Force Exit

Disabled

- 40% opacity
 - No hover
-

6.3 Inputs & Controls

- Dark background
 - Clear focus ring (info color)
 - Numeric input validation
 - Dropdowns for bounded values
-

6.4 Tables

Rules:

- Sticky headers
 - Zebra rows (subtle)
 - Sortable columns
 - P&L color-coded
-

7. Trading-Specific UI Patterns

7.1 P&L Display Rules

Condition	Visual
-----------	--------

Positive	Green + ▲
----------	--------------

Negative	Red + ▼
----------	------------

Zero	Neutral
------	---------

- Animate only on change
 - No blinking
-

7.2 Risk Alerts

- Warning banners appear above content
 - Red overlay when kill condition triggered
 - System lock visual when trading disabled
-

7.3 Kill Switch Design

Visual Treatment:

- Large
- Red
- Fixed position
- Confirmation modal

Text:

"Emergency Square-Off"

8. State Management UX

UI States

- Loading
- Connected
- Disconnected
- Trading Active
- Trading Locked
- Risk Breached

Each state must have:

- Icon
 - Label
 - Color indicator
-

9. Motion & Animation

Philosophy: Minimal, functional

Allowed:

- 150–200ms ease-in-out
- Fade / slide only

Forbidden:

- Bounce
 - Pulse
 - Glow
 - Continuous animation
-

10. Accessibility

- WCAG AA contrast
 - Keyboard navigable
 - Focus visible
 - Color not sole indicator
-

11. Tailwind Theme Configuration

Conceptual tokens:

- colors.bg.primary
- colors.semantic.profit
- font.inter
- spacing.scale

Single source of truth in `tailwind.config.js`

12. Design Governance Rules

1. No inline styles
 2. No ad-hoc colors
 3. No uncontrolled animations
 4. All new components must map to tokens
 5. Risk visuals override aesthetics
-

13. Future Scalability

Design system supports:

- Options trading UI

- Multi-strategy dashboards
 - AI insights panels
 - Mobile companion app
 - Multi-user admin view
-

14. Final Note

This design system ensures AlphaTrade India feels:

- Trustworthy
- Calm under pressure
- Professional
- Institutional
- Risk-aware

This UI should never excite.
It should **reassure**.
